KAPNETIX

AI tool to speed up post-production work on 3D animations.

Kapnetix is an innovative 3D animation solution that uses artificial intelligence technology to speed up post-production work. Our first tool focuses on automation for motion capture (mocap). This technology, validated through a collaboration with 2K Games, outperforms traditional methods in both speed and efficiency by processing an hour of footage in minutes instead of human resources. We are targeting the gaming and film industries with the product.

Unique selling points:

- A proven solution for high-end gaming production.
- Option to operate offline for greater data and IP protection.
- The service frees up professionals to take on tasks that require a greater degree of creativity.
- Opportunity for smaller studios to offer with the same quality of output as established, larger companies.
