GraniteDB

Data Joining Tool – GraniteDB

GraniteDB is a next generation graph database designed to work efficiently with complex data structures, focusing on AI, RAG and data integration. It combines powerful querying, a flexible data model, and a natural language interface that enables fast data navigation without the need to know database languages. The project targets developers, data scientists and companies looking for intelligent knowledge management.

Unique Selling Points:

- Natural language querying without knowledge of database languages.
- Linking structured and unstructured data in one knowledge graph.
- Optimized for AI and RAG as the basis for modern applications and OSINT.
- A simple but powerful model combining property and knowledge graph approaches.
- Open model with enterprise license and monetization through support and premium features.
