The ultimate fun video game that hides maths learning in fast-paced arena battles

The Manabies video game hides maths learning in brisk arena battles. In the most thrilling matches, in the heat of the game, kids get better at arithmetic without even noticing. At the same time, it integrates powerful educational features such as adaptive algorithms to maximize fun and motivation, spaced repetition algorithms to efficiently store new knowledge in long-term memory, a confidence-boosting rewards and assessment system, and a highly comprehensive, albeit hidden, exposition of basic number operations including graphical interpretation and other contexts.

Unique Selling Points:

- The ultimate fun video game that carefully hides the learning of mathematics.
- A great gaming experience is supported by state-of-the-art learning algorithms.
- Catchy game mechanics guarantee long-term and measurable improvement in math.
