# DOKIO

Dokio

## AI model and tool for digitizing and structuring medical reports

Dokio develops a specialized AI model combined with OCR technology for accurate transcription and structuring of Czech medical reports. It uses real reports to train a language model optimized for medical terminology. The model automatically corrects OCR errors, fills in missing characters and converts unstructured text into a standardized form, significantly reducing the need for manual editing and increasing the efficiency of digitization.

### Unique Selling Points:

- Highly accurate combination of OCR and NLP optimized for medical terminology.
- The largest dataset for learning and validation.
- Validated in extensive clinical practice.
