SUSTAINABLY

Sustainly

Sustainly is a sustainability management tool for corporate clients

Sustainly is a sustainability management tool aimed at corporate clients operating in the EU. Companies are now being called upon to provide accurate sustainability reporting from their business partners, stakeholders and financial partners, all in the wake of recent developments in ESG regulation and the need for climate action. Sustainly offers a comprehensive solution for companies seeking to address sustainability issues.

Unique Selling Points:

- Intelligent documentation processing: we use a combination of OCR and NLP to automatically extract data from unstructured sources such as invoices or contracts. This eliminates manual data entry, which is a common barrier for competitors.
- Semantic mapping using LLM: Our solution uses large language models to accurately map parsed data to individual chapters of regulatory standards.
- Automated Difference Analysis: a unique feature is our ability to compare the current state of the business with the requirements of the standards in real time. Our AI identifies “white spaces” in data and processes that would otherwise have to be looked for by an external consultant.
- Generative strategy design: we don’t just stop at generating reports. Our generative AI creates tailored policies and action plans to address identified gaps. So we’ve turned a reporting tool into an autonomous virtual consultant that provides comprehensive know-how at a fraction of the cost of consulting services.
