UNIRMI

Developer and manufacturer of Mosaic high-performance 360° mobile mapping cameras that have extensive applications in mapping and surveying.

The Mosaic X camera from startup Unirmi is the market leader among industrial mapping devices and is ideal for a range of applications such as public green space monitoring, large-scale mobile mapping, outdoor asset management, surveying, emergency response, monitoring and many more. The X camera system is versatile and flexible due to its ability to operate as a stand-alone unit and also easily integrate and adapt with other devices such as lidars, inertial units or RTK GNSS systems.

Unique selling points:

- The device is equipped with an optical system with camera sensors.
- The camera can also record at highway speeds.
- Thanks to its industrial durability, the camera can be used in all climate zones.

Product

Panoramic camera

Technology readiness

- ▶ Development
- Proof of concept
- Prototype
- First implementation
- Extensive implementation
