SERVANTES

A tool for creating e-books that saves 70% of money and time.

The company combines the knowledge and experience of a publisher with software development. It is coming to the market with a range of products to help publishers go digital. Miguel is software for selling digital content protected by advanced and very difficult to remove social DRM (e-books) with the future possibility of generating custom formats without the need to provide or employ typesetters. In addition to the classic selection of formats, it offers a unique option to set up multiple PDF variants directly for end devices (e.g. readers). In line with Miguel, Servantes offers two additional synergistic services. Columbo for removing illegal copies and Ella for listening to audiobooks / reading e-books.

Unique selling points:

- Electronic format from the source file without further human intervention.
- Reduced costs for publishers.
- It allows the publisher to make its own sales, with all proceeds going immediately to its account.
