Foxino is an AI assistant for teachers that saves time with lesson preparation.

Foxino is an AI assistant designed with teachers and students – for teachers and students. It saves 6-8 hours per week in lesson preparation and makes it easier to work even in inclusive classrooms where students with different needs, pacing or with dyslexia, ADHD or language barriers, for example, are encountered. Using smart technology, it automatically creates personalised activities that adapt to each student's level. With a playful format and gamification, it delivers up to 5x more interaction in the classroom and students learn up to 2x faster than in a regular classroom. Foxino also continuously measures individual and whole-class progress, helping teachers quickly identify weak spots and adapt further instruction.

Unique selling points:

- It saves 6-8 hours per week in the preparation of lessons, in accordance with the RVP.
- It also works in inclusive classrooms (dyslexia, ADHD, different pacing).
- Personalised learning for every student.
- It tracks student and class performance in real time.
- Quick breakdown by level and need.
- With up to 5x more interaction in class, students learn up to 2x more effectively.
