Extensive implementation

Lipid particles to increase the absorption of substances.

MarbleMat develops small lipid Oil Marbles that are ideal for the delivery of active ingredients in the food and pharmaceutical industries. Their small size makes them easier to swallow, allows precise dosing and their formulation increases water solubility, leading to better absorption of active ingredients into the body. In addition, they effectively mask unpleasant taste and can enhance the attractiveness of the product with a varied colour range. This patented technology provides the basis for the future personalisation of pharmaceutical products and dietary supplements.

Unique selling points:

- Increase in solubility and therefore absorption of substances.
- Easy to use products due to their size.
- The product allows personalization of dosage.
