An AI tool to improve lesion diagnosis in endoscopic examinations.

MAIA LABS develops cutting-edge AI-based technologies to support physicians in the diagnosis of colorectal cancer during endoscopic examinations. This key product uses real-time video analysis to accurately identify lesions. The system increases diagnostic accuracy and reduces missed findings, especially in hospitals with limited capacity. The solution is compatible with existing endoscopic equipment, allowing for easy implementation into medical practice.

Unique selling points:

- MAIA uses real-time video analytics to continuously process video footage, which increases diagnostic accuracy.
- Advanced machine learning models identify lesions with high reliability and minimize the number of missed findings.
- The system is independent of hardware type and easily integrates into existing medical equipment.
